

BEST PROBLEMS

Rassegna dei migliori problemi

diretta da Antonio Garofalo

Anno XIII - n. 51

3°/2009 - July

Hanno collaborato a questo numero:

in redazione - C. J. Feather, G. J. Perrone, V. Rallo, Mr. Veneziano;

altri collaboratori - Enzo Minerva, Vlaicu Crişan, Eric Huber

Nuovi partecipanti ai concorsi di BP (welcome): Gabriele BRUNORI, Stefano MARIANI, Pascale PIET. In questo fascicolo ancora altri 2 verdetti interessanti che occupano molto spazio a discapito di alcune rubriche. Per la prima volta anche BP adotta il metodo di pubblicare le soluzioni sullo stesso fascicolo degli inediti. È un sistema più pratico per il redattore e per i giudici.

Abbiamo il piacere di ospitare su queste pagine un'altra rappresentante del gentil sesso francese, la seconda dopo Odette Baudoin; una rarità nel mondo dei problemi, impensabile in Italia. Ma ancora con maggior piacere ospitiamo l'opera prima del giovane Gabriele Brunori di Perugia, al quale auguriamo di continuare la carriera appena iniziata. Infine c'è un altro grande ritorno, quello di Stefano Mariani. I perugini (Agostini, Mariani e Brunori) si sono risvegliati, tremate gente, tremate. E per il prossimo numero vi preannuncio un altro grande ritorno...

Marjan Kovacevic, Belgrade Internet Ty. 2008, 1° Pr.

Diagram circe

Un curioso problema, 4 gemelli con posizioni e condizioni diverse. Per motivi di comodità tipografica ho usato 4 diagrammi.

Note agli inediti

Anticirce: on making a capture, any unit (including K) is reborn on its game-array square (as determined according to **Circe** rules), and the captured unit disappears. Since rebirth is obligatory, a capture is legal only if the relevant rebirth-square is unoccupied. A capture may be made from a rebirth-square. Promotion with capture is legal provided the rebirth-square of the promoted unit is unoccupied. In **Anticirce type Calvet** capture on a rebirth-square is allowed (it is the default type). In **Anticirce type Cheylan** capture on a rebirth-square is not allowed. [Effettuando una cattura, qualsiasi pezzo (incluso il Re) rinasce nella sua casa di partenza intesa come una partita di scacchi, in sintonia con le regole Circe usuali, mentre l'unità catturata sparisce; siccome la rinascita è obbligatoria una cattura è legale solo se la relativa casa di rinascita è libera. Una cattura può essere fatta da una casa di rinascita. La promozione con cattura è legale se la casa di rinascita del pezzo derivante da promozione è libera.]

Circe parrain: a captured unit is reborn after the next single move on the square situated in a relationship to the capture-square that is equivalent to the departure and arrival squares of that single move, e.g. capture on e4 followed by move ♖g8-h6: rebirth on f2. If the rebirth square is occupied, or if it would be beyond the board-edge, the capture is normal. [Un pezzo catturato rinasce dopo la successiva singola mossa sulla casa che è in relazione alla casa di cattura in modo analogo alle case di partenza e arrivo della stessa singola mossa. Se avviene, ad esempio, una cattura in e4, seguita dalla mossa ♖g8-h6 la rinascita è in f2. Se la casa di rinascita risulta occupata o al di fuori della scacchiera, la cattura è normale.]

Diagram Circe: a captured unit, when reborn (see **Circe**), reappears on its diagram square. [Il pezzo catturato rinasce (vedere Circe) nella casa in cui era nella posizione iniziale del diagramma.]

Locust: moves on Queen-lines but only by capturing an enemy unit, arriving on the square immediately beyond that unit. [Muove sulle linee della Donna ma solo se può catturare; la cattura avviene saltando il pezzo catturato e cadendo in una casa vuota; per esempio se nel diagramma la Locusta fosse in h7: LOh7xb7-a7]

Empress: Rook+Springer. [L'Imperatrice unisce i movimenti della ♖ e del ♗.]

Soluzioni Inediti

Award in the Santi Pirrone Memorial Tourney

by Antonio Garofalo

Some of the participating problems, curiously enough, did not show the required theme, despite Chris Feather's perfect English translation of the text. The example quoted had a structural defect, in that the rear white battery piece has no function after the Grimshaw, and that defect was unfortunately shared by many of the problems in the tourney. Nevertheless some of those problems have found their way into the award, as they have compensating merits of other kinds.

A few notes on problems not featuring in the award: Togookhuu's work (♙h1/♙e3) could be set more economically, saving ♜ and ♝ by using a ♞ instead. The position in question will be sent to the author. Several problems contained totally unnecessary white pieces, going beyond the abovementioned structural defect in the example problem; others did not show a genuine white Grimshaw.

The competing problems were 32 in number, sent by 19 composers. Their surnames are given in alphabetical order, followed in brackets by the diagram numbers allocated in order of receipt: Fadil Abdurahmanovic (3), Oscar Bonivento (5), Gennady Chumakov (23), Bruno Fanelli (5), Harald Grubert (4, 9), Jean Haymann (16, 17, 20), Christer Jonsson (11), Leonid Makaronez (21, 22), Mikhaïl Marandjuk (24→31), Enzo Minerva (19), Arpád Molnar (32), Dieter Müller (4, 8, 9), Emanuel Navon (13→18), Mike Prcic (3), Michael Shapiro (18), Gerard Smits (10), Lkhundevin Togookhuu (12), Pierre Tritten (1, 2), Menachem Witztum (6, 7).

My thanks to all the participants who kindly made the effort to honour the memory of the great composer Santi Pirrone. Here then is my award, which will become final three months from the date of publication.

Award Best Problems 2002-2003: H≠3 or more moves.

by Vlaicu Crişan & Eric Huber

When Antonio Garofalo posted a request for judges on the Mat Plus forum at the beginning of October 2008, we were immediately interested. The main danger encountered when judging problems published a while ago is to apply today's standards to evaluate the quality of yesterday's output. One does tend to remember problems published in the meantime, but this can be avoided thanks to database help. By the way, we forward many thanks and kudos to the Chess Problem Database Server (<http://www.softdecc.com/pdb/index.pdb?langt=EN&langn=EN>) for its invaluable service. In what follows below, we shall refer to the problems registered in the PDB server by their identifying number and the reader may browse the page presenting the problem with a link like this one: <http://www.softdecc.com/pdb/search.pdb?expression=PROBID='P0004254'>.

We received 130 anonymous problems in the form of a PDF document and decided to split the award in two parts of approximately the same size: 74 helpmates in three and 56 helpmates in four or more moves. However, the analysis of the problems soon made us realise two regrettable facts:

1. The general level was disappointing. The qualities we expected from helpmate problems were a clear and neat presentation allied with sufficiently original contents and too few problems met our standards.
2. Too many problems suffered from various levels of anticipation or had been published twice. We would like to emphasise this second point and direct readers' and other judges' attention to it. For that purpose, we devote the following paragraphs to this subject.

First, we cannot help wondering what prompts some composers to send their problem to more than one chess review. This is clearly not allowed by our Codex (<http://www.saunalahti.fi/~stniekat/pccc/codex.htm>) and we wholeheartedly encourage composers to update their files. Here is the list of double publications:

- 704 (Lasiy) triple publication, also 15012 in *Schach* 05/2002 and H0678 in *StrateGems* 07-09/2002. Bravo, Mr. Lasiy!
- 708 (Bereshnoy), previously published in *Problem-Forum* 2001.
- 755 (Bantush), published in *Ideal Mate Review* 1999.
- 756 (Lozek), published in *The Problemist*, 03/2002.
- 759 (Grushko), republished in Finland P1006153.
- 814 (Vitale), P0573130 published in *The Problemist* in 1997.
- 969 (Grushko), published by the author in a mirrored version P1005779.

The leader in this section is M. Grushko. He was caught in the act in 2004, when Christian Poisson observed M. Grushko's strange mania of publishing his fairy problems simultaneously in *Problemesis* and other reviews. We guess that nowadays Mr. Grushko pays closer attention to his problem files.

The second subject of concern to us was the considerable number of anticipations. The most indulgent interpretation of these anticipations is that some composers are attracted to old-fashioned ideas and are therefore bound to recreate existing problems. Here is the complete list:

- 612 (Pitkänen), anticipated by A. M. Broer (P0509280) as far back as...1928!
- 649 (Di Sarno & Vecu), anticipated by P0567825
- 817 (Nagnibida), *Nil novi sub sole*: identical with P0502008 (1948) and P0502036 (1971), mirrored position of P0502037 (1988) ! We are looking forward to the next occurrence of this position around 2030 A.D.
- 858 (Nagnibida), we all love Peter Kniest, but we should not go so far as to mirror his P0502030 (*feenschach* 1971) to express the warmth of our feelings.

- 900 (Nagnibida), completely anticipated by P0563300, which was also more economical.
- 973 (Grigorian), P0501196 was better.
- 981 (Cistiakov), this one could have been included in the first section. The author manages to get rid of a pawn in his P0575521 (*Schach* 1995) and then publishes the 'new' problem in a mirrored position as an original in the present review. What is the correct term for this behaviour? The winner in the anticipations section is the unchallenged M. Nagnibida (1939-2005). The rest of the competing problems displayed an amazing variety of defects: repeated moves (many originals), white pieces useless in one solution (707, 814, 850), lack of interplay (813) etc.. However, there remained enough good problems.

Helpmates in 3

In the *déjà vu* category, we noticed a few problems which could be related to past items featuring very similar ideas.

- 603 (Di Sarno & Vecu) slightly improves P0501087 by presenting 4 solutions as 2x2 instead of 4x1 but apart from the technical improvement, everything was already said in 1970.
- 607 (Ilievski), the same ♜♙/♙♗ AUW was composed by John Niemann in 1972 (P0508388) with the difference that there were two thematic bPs. Here only one thematic pawn and one unit less is a worthy technical achievement, hardly anything more.
- 652 (Draskowski), partly anticipated by P0532335 with different motivations at B1: here there are active sacrifices of the bQ but in the better P0532335, a black Grimshaw.
- 779 (Muralidharan), P0556044 was not as economical, but showed reciprocal batteries as early as 1955.
- 810 (Fomichev), P0577699 is very similar and more economical.

A. Garfalo

2nd Hon. Ment.
703. C. Jonsson

H#3 - 2 sol.

H#3 - 2 sol.

H#3 - b) ♙f4-d6

H#3 - 2 sol.

1st Prize: 895 (Jones)

1. ♖e7 ♙d5 2. ♘d6 ♙xb7 3. ♗d5 ♗xd5≠ 1. ♗b4 ♗d5+ 2. ♙c4 ♗a5 3. ♗d5 ♙xd5≠

Typical Jones material and ODT strategy! The theme is quite interesting compared to the definition of the last WCCT theme: a white piece stops on a square before leaving it at the second move. Subsequently another white piece delivers mate on the same square. Thus, except the exchanged W1 and W3, it is interesting that Black also plays to the thematic square at his last move and this active Pelle sacrifice reminded us of Fadil Abdurahmanovic's masterpiece (see P0506884). The construction seems flawless.

2nd Prize: 899 (Vladimirov & Nefyodov)

1.e3 ♖e4 2.♗xc4 d3+ 3.♗f3 ♖f6≠ 1.♞f7 ♖e5 2.♗xe5 d4+ 3.♗c6 ♖g4≠

Another impressive wealth of strategy: a Zilahi with active white sacrifices on squares just vacated by Black. This Follow-My-Leader (FML) motivation is particularly difficult to achieve and here it is doubled, in diagonal-orthogonal correspondence; the squares where the b♖ is mated are squares initially occupied by the sacrificed white pieces. Each motivation in this problem has been seen previously, but the whole package seems to be original. Readers may think, with the benefit of hindsight, that this work foreshadowed recent problems by the phenomenal Semenenko Brothers: P1072984 (consecutive white sacrifices on empty squares, 2004) and P1074091 (the b♖ marches to squares initially occupied by white pieces, 2006).

The Honourable Mentions go to problems with interesting strategy, but not quite perfectly executed.

1st Honourable Mention: 611 (Onkoud & Garfalo)

a) 1.♖e4 ♖xe5+ 2.♗xe5 ♗a4 3.♞d4 ♞d3≠ b) 1.♖c7 ♞xd5 2.cxd5 ♗xc2 3.♖c6 ♖b4≠

And here is a special case: 611 has by far the most original content in the competition! It features a Zilahi with paradoxical elements: the pinned piece finds itself pinned on another line after W2, so B3 (like B1) must unpin it. It is amazing that the b♖ (in a) and b♗ (in b) pin both white pieces and unpin them! But there is also quite a price to pay: the three b♖s, the rather clumsy construction and the poor twinning involving b♖ movement. In spite of all these defects, we still consider this composition worth rewarding.

H≠3 - 2 sol.

H≠3 - 2 sol.

H≠2.5 - 2 sol.

H≠3 - 2 sol.

2nd Honourable Mention: 703 (Jonsson)

1.♖xb4 ♞c4 2.♖b2 ♞e3 3.♖b3 ♖b4≠ 1.♖xa4 ♗d5 2.♖c2 ♖f4 3.♖b3 ♞a4≠

On his first move Black annihilates a w♖ and then performs two consecutive selfblocks, hence a mutual Grimshaw on b3. The white strategy is less unified; in particular, W1 does not match, although there is an exchange of w♖/w♞ functions, ending with a mate on the square vacated by Black. This rendering of the WCCT-8 theme by means of w♖ annihilations mixed with Grimshaw has been shown before (see for instance P0562265, P0560076 and P0557852). We also deplore the rather weak interplay. Without these defects, the problem would have been placed higher in the award.

4th Commend.
648. G. Chumakov

H≠3 ** - 1 sol.

5th Commend.
758. C. J. A. Jones

H≠3 - 2 sol.

6th Commend. 896.
K. Muralidharan

H≠3 - b) - ♗d3

3rd Honourable Mention: 974 (Hudak)

1. ♗xb3 ♖b5 2. ♖c2 ♗xc3 3. ♖b1 ♖a3≠ 1. ♗xe5 ♗a5 2. ♖d4 ♖xc2+ 3. ♖c5 ♗b4≠

We liked the dual avoidance on W1: 1... ♖b1? and 1... ♗c5? simply fail because they occupy the square aimed at by the bK. B1 is also good, vacating a square allowing the b♖ passage to the mating square, without being a distant selfblock. The switchbacks on W3 and the model mates are also nice, but the rest of the play is rather dull.

1st Commendation: 605 (Jones)

1. ♖a5 bxa5 2. ♖c5 ♖b6 3. ♗d5 b4≠ 1. ♖d2 b5 2. ♖c4 ♖c6 3. ♖e4 bxc4≠

These chameleon echo mates are charming. There are certain similarities with P0567754, featuring the same white material, but the mates are quite different.

2nd Commendation: 701 (Murarasu)

1... ♖f8 2. ♗xc2 ♖e1 3. ♖e6 ♗xf4≠ 1... ♗g5 2. bxc2 ♖b8 3. ♖f5 ♖e8≠

The rather free long range white pieces are very difficult to handle, hence the heavy construction and the barely legal position. The solutions ending in pinmates are quite homogenous; perhaps the only slight drawback being that the wR is not supported by the wB in the second solution.

3rd Commendation: 757 (Garai)

1. ♖c3 ♖f2 2. ♗d1 ♖xe3 3. ♗c5 ♖e4≠ 1. ♖c3 ♖xe3 2. ♖e1 ♖e4+ 3. ♖d3 ♖f2≠

A neat setting of a white move cyclic shift (ABC-CAB), using a halfpin. The FML effect at B2, unpinning the white piece, is not perfectly balanced: 2. ♗d1 unguards the mating square (e4), while 2. ♖e1 does not. We could not overlook the fact that the black strategy is not unified.

4th Commendation: 648 (Chumakov)

1... ♖xh7 2. ♗g7 gxf6 3. ♗xh8 ♖xh8≠ 1... ♖:f7+ 2. ♖g8 gxf6 3. ♖xh8 ♖f8≠ 1. ♗xg5 hxg5 2. ♖xg7 gxf6+ 3. ♖h6 4. ♖xf7≠

The original change of play between set play and solutions offers the Zilahi theme. The set play also displays echo mates.

5th Commendation: 758 (Jones)

1. ♗d6 ♖xb8 2. ♖e4 ♖b6 3. ♗d3 ♖c6≠ 1. ♖xg3 ♗xh6 2. ♖d4 ♗g5 3. ♖d3 ♗f6≠

The strategy of annihilation of black units is rather thin, but the two black selfblocks on the same square and the white manoeuvres raise this problem to the level of a commendation.

6th Commendation: 896 (Muralidharan)

a) 1.d6 ♗b1 2.d5 ♖d3 3.d4 ♗c2≠ b) 1.d5 ♖c3 2.d4+ ♖b2 3.d3 ♖c3≠

Three black tempi in each solution. Nothing less, but nothing more.

Helpmates in 4 moves or more

The *déjà vu* files are not empty in the longer helpmates either, but only a few problems are involved this time.

- 654 (Chumakov & Fomichev), P0500733 (Kornilov 1983) presents 5xExcelsior and 5 ♖-promotions.
- 716 (Novomesky), nice chameleon echo mates, partially self-anticipated by P1002819.
- 859 (Lozek & Garofalo), looks like P0500796 (AUW+1 promotion) but mostly like P0508831 with mate in the a1 corner.

The remaining problems were not breathtakingly original but some could be singled out of the lot.

Prize 857. C. Jonsson	Hon. Ment. 713. C. Jonsson & R. Wiehagen	1 st Commend. 855. D. Meinking	2 nd Commend. 763. M. Ylijoki
H≠4 - 2 sol.	H≠4 - b) ♖g6-f3	H≠4 - b) ♖f5-e5	H≠5.5 - 1 sol.

Prize: 857 (Jonsson)

1. ♖b3 ♜xe8 2. ♖c4 ♜xb8 3. ♖c3 ♜c6 4. ♖d3 ♜d6≠ 1. ♖c3 ♜xe7 2. ♖d4 ♜xb7 3. ♖d3 ♜d6 4. ♖e3 ♜c6≠ Undoubtedly the best problem of the competition! Two perfectly matched solutions end in chameleon echo mates. The double switchback by the w♜s is achieved by very simple means (i.e. annihilation of black pieces controlling w♜ initial squares). The black strategy is also simple – three selfblocks and the b♜ running to the mating square. However, the interplay is ensured by the clever position of the b♜, who opens the 3rd rank for the b♖s. The elegance of the interpretation is the typical trademark of the distinguished Swedish composer.

Honourable Mention: 713 (Jonsson & Wiehagen)

a) 1. ♖h2 ♜g8 2. ♖d6 ♜f7 3. ♖d5 b4 4. ♖d4 ♜f6≠ b) 1. ♖h6 ♜a2 2. ♖d6 b3 3. ♖d5 ♜f4 4. ♖d4 b4≠ The old Indian theme is mixed with an impressive change of roles between the b♖ and b♜: each of them alternately blocks on d4 and d6. Of course the white strategy is not entirely original (see for instance P0516502), but we could not find a clear predecessor for the whole package. This problem would have certainly received a prize if B3 had not been repeated.

1st Commendation: 855 (Meinking)

a) 1. ♖f3 fx e6 2. ♖a8 exd7 3. ♖c8 dxc8♖ 4. ♖e4 ♖h3≠ b) 1. ♖h3 exf6 2. ♖h8 f7 3. ♖g8 fxg8♖ 4. ♖h4 ♖g2≠

The typical rush for ♖ promotion of the w♖ has been shown several times before. Here the original value is added to by the black Bristol on the 8th rank. Of course, this Bristol cannot be pure, but the double rendering of this idea and the exchange of roles between the b♖ and b♜ deserve recognition. Also interesting is that the b♜ acts as a barrier against b♖ and b♜ checks – hence forcing the order of moves. A pity that this could not be arranged without twinning!

R. Wiehagen

H≠7 - 2 sol.

2nd Commendation: 763 (Ylijoki)

1...♙g2 2.h4 ♚h1 3.♙f1 ♙g2 4.♙d3 ♙f1 5.♙g6 ♙d3 6.♙h5 ♙f5≠

The content speaks for itself: two w♙ tempos and an interesting manoeuvre by the b♙h3 to reach h5 in four moves. However the first w♙ tempo is quite artificial (no other white move is possible) and so is the switchback. More subtle is the reason why the b♙ cannot leave g4 and return providing a shortcut for the b♙h3 to reach h5. The great number of black spectators seems to be unavoidable.

3rd Commendation: 657 (Wiehagen)

1.♖h6 e3! 2.♙h4 e4 3.♘g5 e5 4.♙f7 e6+ 5.♙g6 e7 6.♙h5 e8♘ 7.♙g6 ♘f6≠

An achievement worth quoting: surprising Excelsior-hesitation ending in ♘ promotion. This has been shown before even more economically (see for instance P0582675), but here the author managed to show four active blocks (compared to only 3 in Bakcsi and Zoltan) by using one extra half move.

Commendations without order: "*Everything in the first move*".

683 (Grushko)

a) 1.♖c7 c5 2.♙c4 ♘d8 3.♙b5 ♘xe6 4.♙a6 ♘xc7≠ b) 1.♙c4 ♙b8 2.♖a7+ ♙c7 3.♙b5 c4+ 4.♙a6 b5≠ This neat miniature receives a commendation for the unexpected b♖ active sacrifice on B1 in a). The twinning mechanism is also paradoxical. We disliked the repeated b♖ moves - a drawback which severely diminishes this problem's value.

765 (Vitale & Wiehagen)

1.♙f3 gxf3 2.♘e4 fxe4 3.♙g5 e5 4.♙f4 e6 5.♙e3 e7 6.♙d2 e8♖ 7.♙c1 ♖e1≠ 1.♘h1 g3 2.♙d1 g4 3.♙g5 gxf5 4.♙f4 fxg6 5.♙e3 g7 6.♙d2 g8♖ 7.♙c1 ♖g5≠ A long Meredith with two solutions of dissimilar values: the 1.♘h1! solution is brilliant, because the key can be understood only after White's last move, while the 1.♙f3 solution has nothing special. Again, the repeated b♖ moves (B3-B7) detract.

We congratulate the winners and thank all the participants.

Vlaicu Crişan & Eric Huber, March 2009.

My most sincere thanks to Vlaicu Crişan e Eric Huber for their ample and detailed award, which will become definitive 3 months after publication. Possible claims must be sent to the Editor: Antonio Garofalo, via Collodi n.13 70124 Bari - Italy. E-mail: antgarofalo@tiscali.it.

Ricostruzione

1.♚e2? [2.♚xe4≠] 1...♗g4 2.♚xg4≠ 1...exd4 2.♚b5≠ ma 1...e3!

1.♚c2! [2.♚xe4≠] 1...♗g4 2.♚c8≠ 1...exd4 2.♚c5≠

1.♚a8? [2.♚xe4≠]

1...♗g4 2.♚f8≠ 2.♚c8≠ 1...exd4 2.♚a5≠ 2.♚d5≠ ma 1...♗c6!

Zagorouiko 4×2, Ellerman-Makihovi.

Un problema che a giudizio dei partecipanti e mio personale avrebbe meritato molto di più della Lode ricevuta. A mia giustificazione solo il fatto che non conosco la qualità degli altri problemi premiati. Non difficoltosa la ricostruzione, con la sola "trappola" di possibili duali. Partendo dalla soluzione data è subito individuabile la posizione iniziale della Donna bianca, in quanto sono indicate ben 5 sue prime mosse. Da questo a trovare la posizione del Re nero, che dalla Donna riceve 7 matti da case differenti, il tratto è breve. Ovvio la posizione di un pedone nero in 'e5' conoscendo la mossa 1...exd4; facile trovare la posizione dell'♙b3 bianco conoscendo due sue case di arrivo (♙e6 ed ♙c2). Individuata la posizione di 4 pezzi, due bianchi e due neri, non resta che aggiungere il "contorno" che è l'unica cosa che richiede più tempo; ma in questo sono stati bravi tutti i partecipanti che hanno inviato la loro ricostruzione in tempi relativamente brevi.

Hanno partecipato alla gara (con commenti): - Prof. Oscar Bonivento: "Provo a cimentarmi nella ricostruzione (amore di antichi tempi...!)" - Antonio Garofalo: "Potevo evitare il tentativo supplementare ♚a8, ma non vedo lo scopo di aggiungere un ♗a7 nero." Hans Nieuwhart: "Good how the black knight can close the line, after the white Bishop close the line for the Queen. Multifunctional moves!" - Valerio Agostini: "...questo esercizio mi ha appassionato non poco e mi ha permesso di conoscere un lavoro davvero eccellente. La cosa mi è piaciuta molto! ... Il di più è venuto dal fatto che mi sono dovuto impegnare anche come compositore! Non avrei mai creduto che si potessero fare le due cose insieme!!" - Gerd Prahl: "Clouage direct, déclouage direct, Zagorouiko 4x2, Ellerman-Makihovi (Winchloe). I like to reconstruct chessproblems. I already take part in Synthetics of *The Problemist* and *The Macedonian Problemist*, also in *Reconstructie of Probleemblad*. Altri partecipanti: Alberto Armeni, Saverio Ce', Valery Krivenko, Efrén Petite e Pietro L. Placanico. Un record di partecipazione, ben 10!

Quasi tutti hanno mandato la ricostruzione corrispondente all'originale con l'eccezione di due: Placanico, la cui ricostruzione (8/7S/6r1/4pk1P/3Rp3/1B5P/Q5sK/2B5) ha il pregio di utilizzare un Pedone bianco anziché un Cavallo bianco (mettendo al posto del ♘h2 il Re bianco e aggiungendo il pedone in h3), ma ha il difetto di avere creato un duale in una variante tematica (1.♚e2? [2.♚xe4≠] 1...♗g4 2.hxg4/♚xg4≠). Posizione identica a questa è stata inviata dal Prof. Bonivento, con la sola differenza del Re bianco in h1. Da notare: sono gli unici partecipanti sprovvisti - sfortunatamente - di computer, altrimenti un programma avrebbe fatto loro notare il duale.

Ricostruzione n.40, soluzione tematica:

1.♗d2? (C) [2.♗d7≠] 1...♗f6 (a) 2.♚d6≠ (A) Ma 1...♘e7! (b)

1.♗f2? (D) [2.♗d7≠] 1...♘e7 (b) 2.♚f4≠ (B) Ma 1...♗f6! (a)

1.♖xb2! [2.♘d7≠] 1...♘e7 (b) 2.♗d2≠ (C) 1...♘f6 (a) 2.♗f2≠ (D)

NUTS (25)

di Mr. Veneziano

John Nunn, 1986

Una partita ha inizio con 1.e4 e termina alla quinta mossa con ♖x♗ scacco matto.

Siete in grado di ricostruire una simile partita?

Questo problema scacchistico venne proposto dal tedesco Frederic Friedel, direttore di Chessbase, sia a Garry Kasparov, sia ad Anatoly Karpov, riuniti a Londra per le trattative del loro terzo match per il titolo mondiale. Entrambi i K tentarono di risolvere l'enigma, prima durante un lungo viaggio in auto, poi per due giorni, nelle rispettive stanze d'albergo, senza esito.

Quando si dovettero salutare, Friedel consegnò a Garry una busta sigillata con all'interno la soluzione del problema, chiedendogli di non aprirla e di scrivere all'esterno della busta, quando l'avesse trovata, la sua soluzione.

La busta rimase sempre chiusa. Garry la portò con sé in quella che ancora si chiamava Unione Sovietica. Sottopose il bizzarro problema a Mikhail Botvinnik, ex-campione mondiale e suo maestro. Né Botvinnik né gli allievi della sua famosa scuola, tutti promettenti scacchisti, riuscirono a risolvere il quesito.

In seguito la lettera andò persa. Kasparov, furioso, ormai convinto che il problema fosse stato mal formulato, prese il telefono, chiamò Friedel ad Amburgo e finalmente ebbe la soluzione. Sapreste fare meglio di ben tre campioni del mondo?

Mr. V.

Soluzione N. (24)

(Formánek) Secondo il pensiero di Sam Loyd in un problema i pezzi vengono posizionati sulla scacchiera, quindi in precedenza NON sono stati mossi! Dunque 1.0-0 (!) risolve. L'arrocco viene effettuato correttamente, infatti il Re si muove di due passi verso la T e questa lo salta, ponendosi nella casa adiacente al Re! Un joke divertente.

Notiziario (News)

Valentino Ricci Memorial Tourney (VRMT)

Sono richiesti tre mosse diretti (≠3) con almeno 2 o più fasi di gioco (per esempio GA/GR, GV/GR, GA/GV/GR). Sono anche richiesti qualsiasi tipo di cambi fra le fasi: cambi di matti, difese, minacce, effetti ecc. Premi: 1° Premio 150 Euro, 2° Premio 100 Euro, 3° Premio 50 Euro, Menzioni Onorevoli, Lodi.

I problemi che non raggiungono il verdetto tornano a disposizione dei loro autori. Il verdetto sarà pubblicato su *Best Problems*. Prego spedire gli inediti a: **Valerio AGOSTINI, Via del giochetto, 2/F-2; 06122 PERUGIA - (Italy)**. E-mail: avalerio@libero.it - Data di chiusura 30 giugno 2010. Giudice: Antonio Garofalo.

[Three moves direct (≠3) are requested with at least 2 phases or more (for example setplay/solution; try/solution; setplay/try/solution). They are also requested any type of changes among the phases: changes of mates, defenses, menaces, effects etc. 1st Prize: 150 Euro, 2nd Prize: 100 Euro, 3rd Prize: 50 Euro, Honourable Mentions, Commendations. The problems that don't reach the award return back to their authors. The award will be published on *Best Problems Magazine*. Please send the originals to: **Valerio AGOSTINI, Via del giochetto, 2/F-2; 06122 PERUGIA - (Italy)**. E-mail: avalerio@libero.it - Closing date: June 30, 2010. Judge: Antonio Garofalo.]

Correzioni (Corrections)

Diag. 2258. Non è minimummer ma un normale Serie H≠13 (It's not minimummer).

Diag. 2260. Nieuwhart è olandese, non tedesco (Netherland, not Germany).

Compleanni da ricordare: Valerio Agostini 3/8/1954, 55 anni; Mario Albasi 21/7/1949, 60 anni; Alberto Armeni 14/9/1944, 65 anni; Prof. Oscar Bonivento 27/11/1914, 95 anni; Marco Campioli 10/6/1954, 55 anni; Alessandro Fasano 3/2/1939, 70 anni; Giuseppe Ferro 26/7/1934, 75 anni; Vito Rallo 3/8/1939, 70 anni; Prof. Pietro Rossi 26/5/1924, 85 anni.

Auguri a tutti e mi si perdonino eventuali dimenticanze.
